Tim - I am scheduled to be off on Monday.. Steve Demczak will be on vacation all next week. Dave and Dana could meet with you on Monday.

I will be back in on Thursday, April 24. A status report on the fines after your visit to the site will be fine.

Thank you. Pam

Pam,

Yes, I will be in Salt Lake on Monday the 21st. I have talked with Priscilla about a 1:30 pm. meeting to address the reclaimability study. Linda Matthews of JBR may also attend this meeting with me, still trying to work that out.

I plan on being at the mine site Tuesday & Wednesday. Priscilla had mentioned wanting to visit Hidden Valley on possibly Tuesday.

I have spoken to Seth already this morning and he notified me of his phone conversation with Steve following his 4/15 visit. He also mentioned Dave Darby & Dana Deane had visited the site yesterday.

As for the clarification & status response, I ask that this notification be delayed until my mine visit next week. I will try to have something to submit on my departure from Utah.

I would like to visit with Dave, Dana and you for a few minutes on Monday concerning the PHC update if at all possible.

Tim

Tim - these were items that were brought up during the last inspection (March 19, 2003) and were given 30 days to be addressed. Steve had these observations during a site visit on Tuesday, April 15. Please make sure that they all are adequately addressed.

Addressing the coal fine situation and making sure that the actions taken to reduce and control the coal fines are working is important. A follow-up to Steve or me to notify the Division how effective these methods are working is in order , i.e. the spray, scalping screen, MagChloride. Also, please update us on when the telescoping chute will be installed? Dust suppression product identified and used at the site? On the phone, I mentioned that the description of how the "coal loadout is operating efficiently and will control the dust problem" needs more elaboration.

Also, are you coming out to Salt Lake next week?

Please let me know about all of the above...Thank you. Pam
